

# Proposed Bicycle Facilities - Bicycle Boulevards

## Bicycle Boulevards

- Bikeways developed on existing low-traffic neighborhood streets where speeds and traffic volumes are kept low enough so it is comfortable for cyclists to share the lane with motorists.
- Roadways where the movement of bicycles is given priority over through traffic movement.
- Encourage automobile use on parallel corridors, keeping traffic volumes and speeds low on identified boulevards.
- Have signals or other facilities to help cyclists safely cross major streets.

## POTENTIAL APPLICATIONS
